GABLE RESTRAINT SYSTEM TECHNICAL GUIDE

Gable Restraint System

ITW Construction Products' Cullen brand of timber engineering connectors has been synonymous with innovation and quality for over forty years. In collaboration with national housebuilders, the Trussed Rafter Association and industry partners, ITW's technical experts have created an innovative system featuring the Cullen Gable Restraint Bracket for a complete solution to connect timber gables to masonry walls.

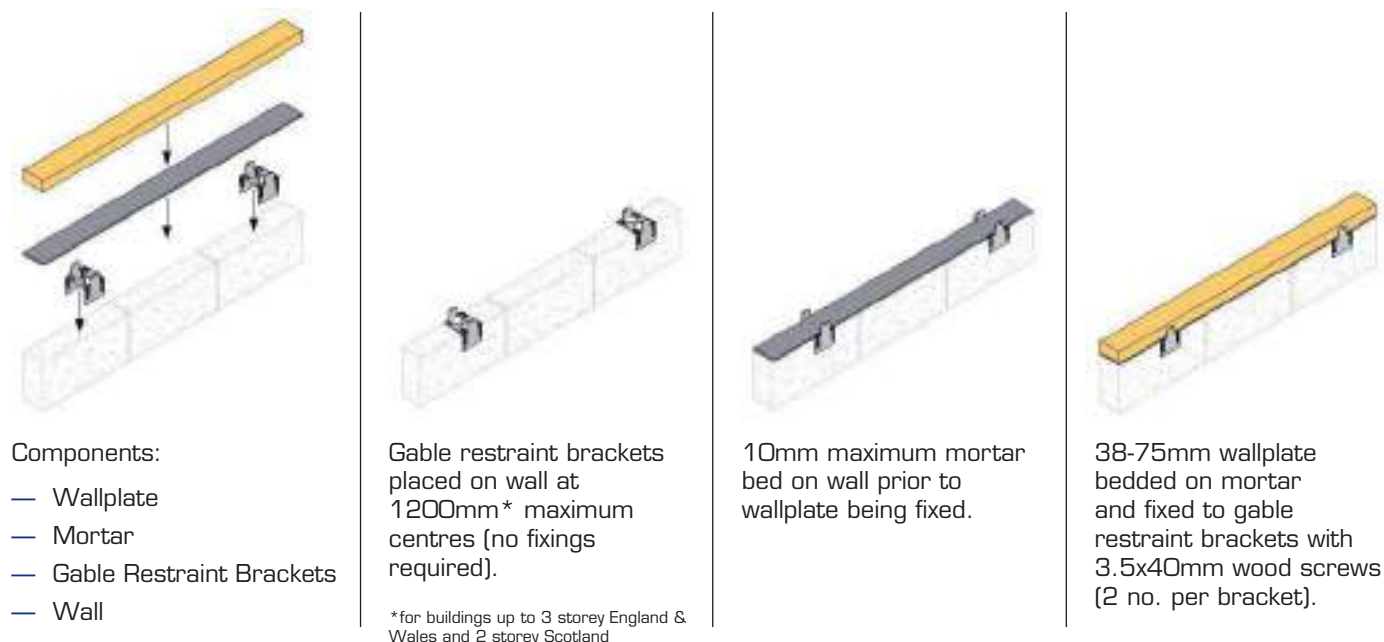

The details have been developed to safely transfer lateral wind load on the masonry and timber gable ends into the braced roof diaphragm. This provides a verified connection between timber gable panels to masonry walls. The details give an option to have a continuous wall plate or a stepped wallplate with the gable wall plate being raised to suit the bottom chord depth of the truss. Either of the details meets the minimum requirement of Building Regulations 2010 approved document A, Scottish Building regulations domestic, NHBC Standards for houses of five storeys or less in England and Wales and four storeys or less in Scotland. Both details are accepted by NHBC.

This NHBC accepted "whole system" solution incorporating the Cullen Gable Restraint Bracket and restraint straps including Paslode nail fixings with all centres, spacings and connections already calculated means that whenever our detail is followed the system is underwritten by ITW Construction Products.

Gable Restraint Bracket & Application

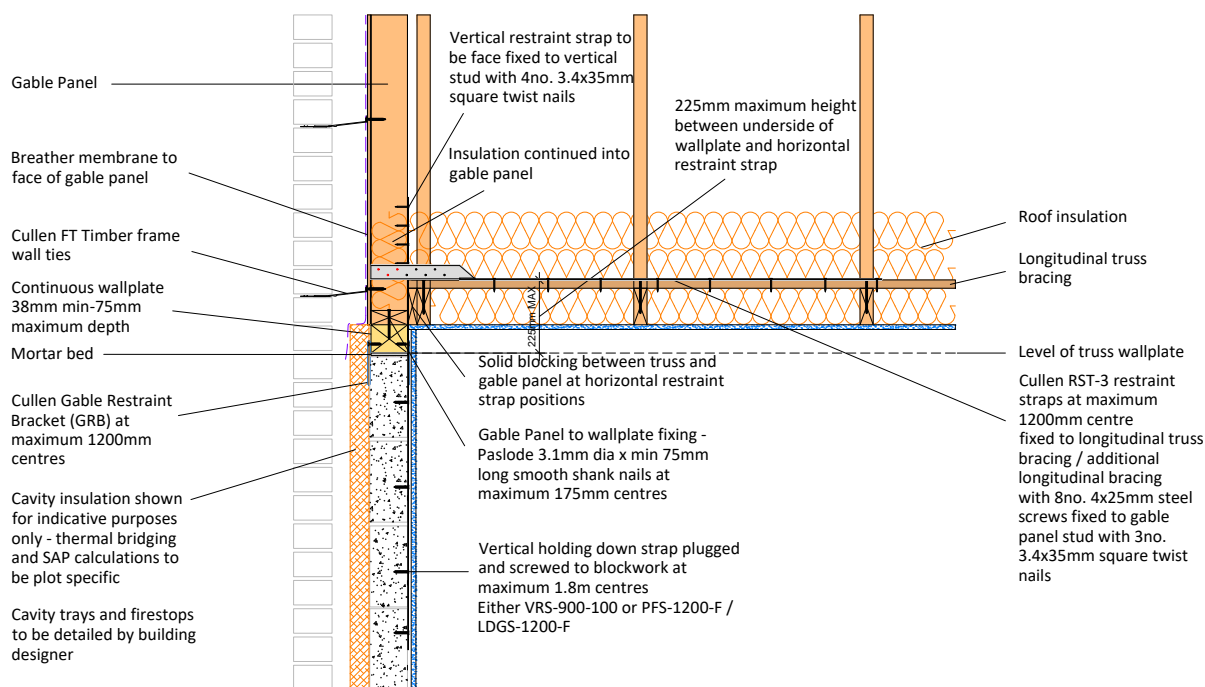

Gable Restraint Bracket Installation

Class 1 Buildings / houses of single occupancy **three storeys** or less England & Wales and **two storeys** or less Scotland

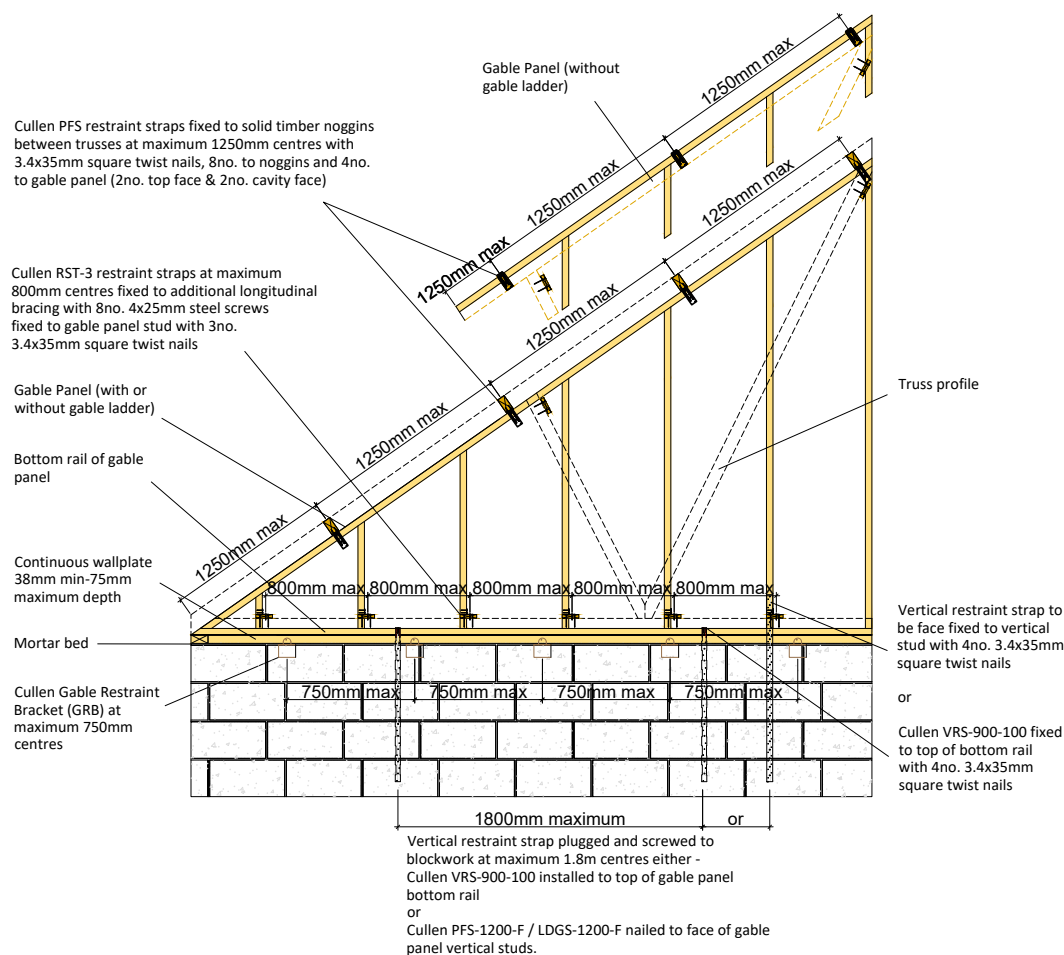

Timber Gable to Masonry fixing detail to cold roofs - Continuous Wallplate

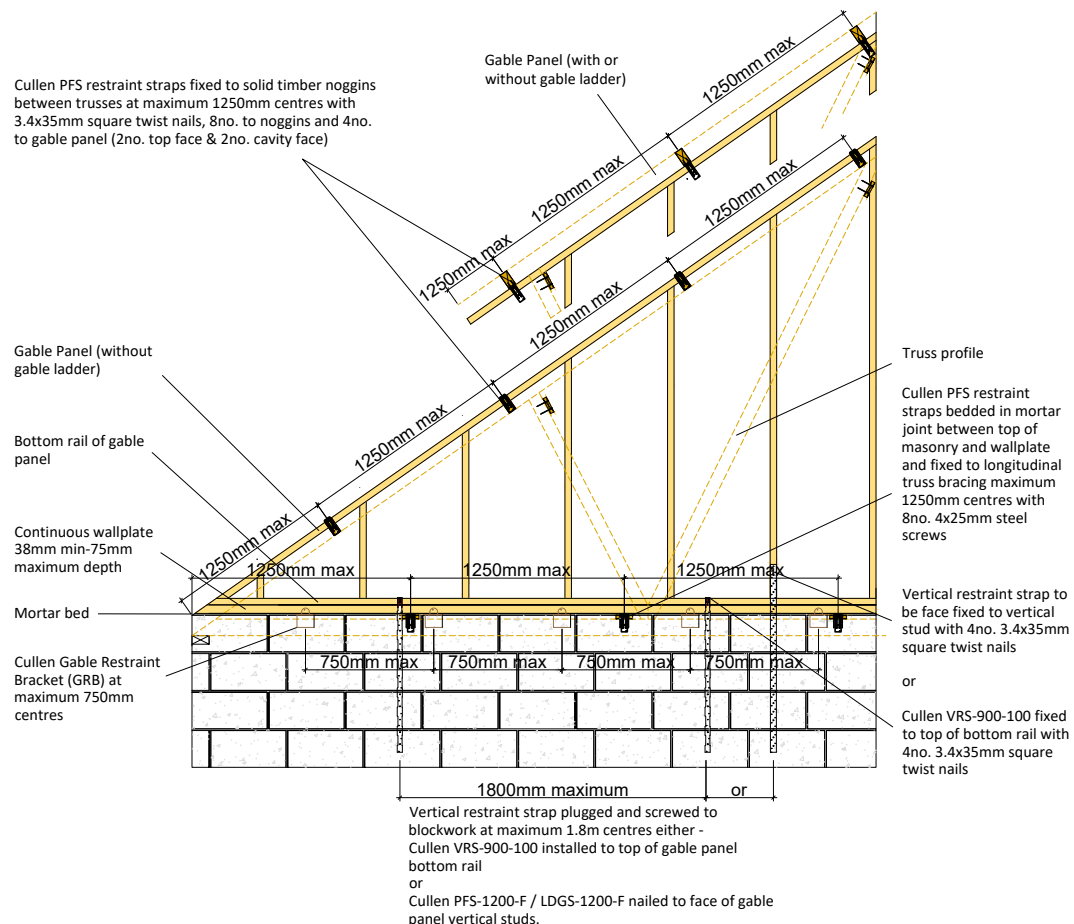

Class 2a Buildings / houses of single occupancy **five storeys** or less England & Wales and **four storeys** or less Scotland

Timber Gable to Masonry fixing detail to cold roofs - Continuous Wallplate
