

# ANNOUNCEMENT

25/8/23

## NEW CRENDON TIMBER ENGINEERING BRANCH, WELLINGBOROUGH, NORTHAMPTONSHIRE

## For all your Timber Engineering Solutions ACROSS NORTHAMPTONSHIRE

Crendon Timber Engineering are delighted to announce the opening of our new branch at Wellingborough, Northamptonshire. The branch will trade from 22-27 Don White Road, Ogee Business Park, Wellingborough, Northamptonshire, NN8 4FT and manufacture and deliver Roof Trusses, Posi-Joists and Spandrel/Gable Panels for projects mainly in Northamptonshire and the South Midlands.

The new branch continues the last five years of rapid expansion of the Crendon Timber Engineering business to offer full delivery coverage across England & Wales.

For over 55 years, Crendon Timber Engineering have been at the forefront of the design and manufacture of engineered timber products, offering a comprehensive one-stop shop for the design and manufacture of all timber engineering solutions with all manufacturing facilities quality controlled and CE certified.

Branch Manager Chris Williams and all of his team are looking forward to working with new and existing customers in the coming months as we establish and develop the business. Over the last three months we have been working extremely hard to ensure we have our timber stocks, manufacturing equipment, design facilities and HGVs for deliveries all ready and in place for our launch on 1/9/23.

## Crendon Timber Engineering core product range includes:

Timber Roof Trusses are the most cost effective way to build a roof – a flexible, practical, easy-to-erect engineered solution which saves time on-site and can use up to 40% less timber than traditional options. Crendon Roof Trusses have up to 16m clear span and are manufactured from TR26 graded timber either 35mm or 47mm thick.

Spandrel Panels are a cost effective alternative to blockwork walls offering considerable build time savings. Supplied as fire and sound rated timber frame panels, made to the profile of the roof, Spandrel Panels remove the need to build up masonry party walls into the roof space, saving time on build programmes. With built in lifting straps they are installed alongside the Trusses to form a fully compliant dividing wall.

Crendon is the leading UK producer of Posi-Joist or open-web metal joists for housing and commercial applications for both floors and roofs. Posi-Joist combines the lightness of timber with the strength of steel, are easy to install and span greater distances than timber alternatives to allow unequalled design freedom.

### Crendon branch network

The Crendon team are constantly working with customers to design and create new levels of on-site efficiency, with exceptional service and innovative thinking, to help builders and developers build better quality new homes and commercial properties.

Please contact our team to discuss how we can assist on your next project, with our five-day Fastrack delivery service for Trusses and Joists.
